Job description

...If you want to do agile software development,

...If you are passionate about creating great software,

... If you want to work on a project that is going to help other Agile teams be more productive,

... If you want to be on the leading edge of applying web technologies,

... If you are serious about Java development

.....We want to talk to you!

We will expect you to:

- Be a passionate practitioner of Agile development methodologies
- Work in an team to build a scalable and secure service;
- Perform development tasks, including design & architecture, coding and troubleshooting software and provide guidance to the rest of the team members
- Interact with product management to refine feature requirements and write feature specifications
- Collaborate closely with the other team members to ensure the product meets the required quality and performance standards
- Deploy new releases and ensure production stability
- If required, collaborate with other functional groups or teams to ensure project success

It's highly recommended that you have:

- 3+ years of industry experience;
- a B.S. or M.S. degree in Computer Science, Engineering or equivalent;
- Extensive knowledge and experience with JSE, Spring and Hibernate;
- Excellent knowledge of at least one RDBMS (Oracle is preferred);
- Sound knowledge and understanding of object oriented concepts, design patterns and web application architectures;
- Experience testing software using unit tests and integration tests;
- Good written and verbal communication skills;
- Proficient in English;

It's a perfect match if you also have:

- Experience with Ruby on Rails is a huge plus
- Experience with jBoss
- Experience with GlassFish, Apache Geronimo, Tomcat
- Knowledge of client side technologies (Flex, ActionScript, JavaScript, HTML, CSS, jQuery)
